Disaster Recovery Revolution in 1 Page

It turns out there is something new under the sun in disaster recovery. Extending the well-adopted concept of virtual appliance (VA) to the application layer, AppZero has pioneered the virtual application appliance (VAA) which delivers disaster recovery at a time and cost that approach zero. AppZero VAAs capture a server-based application, with all its dependencies, in a single file - with zero operating system (OS) - available for instant execution on any server that is running a compatible OS, anywhere. AppZero VAAs slash the cost of disaster recovery to almost nothing, until or unless a disaster actually happens. In keeping with the revolutionary nature of our offering, we are going to get the basics across in 1page and invite further exploration at www.appzero.com.

What you don't need

- You don't need to replicate your infrastructure.
- You don't need to buy servers, storage, or bandwidth
- You don't need to mirror your current environment
- You don't need to reserve disaster recovery for only the most critical applications
- You don't need to be locked into your hardware or virtualization platform vendor
- You don't need to tie up capital while you wait for a disaster that may never happen

What you need

- Your applications and data
- AppZero VAAs
- An execution venue (physical or virtual machine) - perhaps in the cloud - for recovery
- A safe place to store files
- A finger to click and move files
- The willingness to be an early adopter

What you get

- Bullet-proof disaster recovery at an incremental cost that approaches zero
- Application readiness for execution in time that approaches zero
- An approach that makes disaster recovery cost-effective for every application
- Zero capital investment
